***PolyCo's VR™ products contain no PVC***

PolyConversions, Inc. is proud to introduce VR™ Protective Wear, a proprietary line of protective apparel which is 100% VINYL FREE and LATEX FREE. VR provides impervious, puncture and cold-crack resistant protection and has been scientifically designed to REPLACE vinyl and other traditional plastics. VR is odorless and contains no toxic substances or plasticizers, and can be safely land filled or incinerated without harm to the environment.

VR replaces conventional protective garments made of vinyl and other traditional materials intended to safeguard clean room and non-clean room employees from potential chemical or bio-hazard contamination. While approved for direct food contact, VR has also been clinically tested to offer far superior resistance to chemicals such as nitric, sulfuric, hydrochloric, and hydrofluoric acids.

VR provides durable lightweight garments for use in contamination control in the food processing, industrial and medical industries. The VR line of protective wear includes Aprons, Sleeves, Gowns, Gloves, Boots, Shoe Covers, Pants, and Jackets.
